

Low-Cost WiFi Video Transceiver for Home Door Camera Surveillance System Viewing Using a Smart Phone

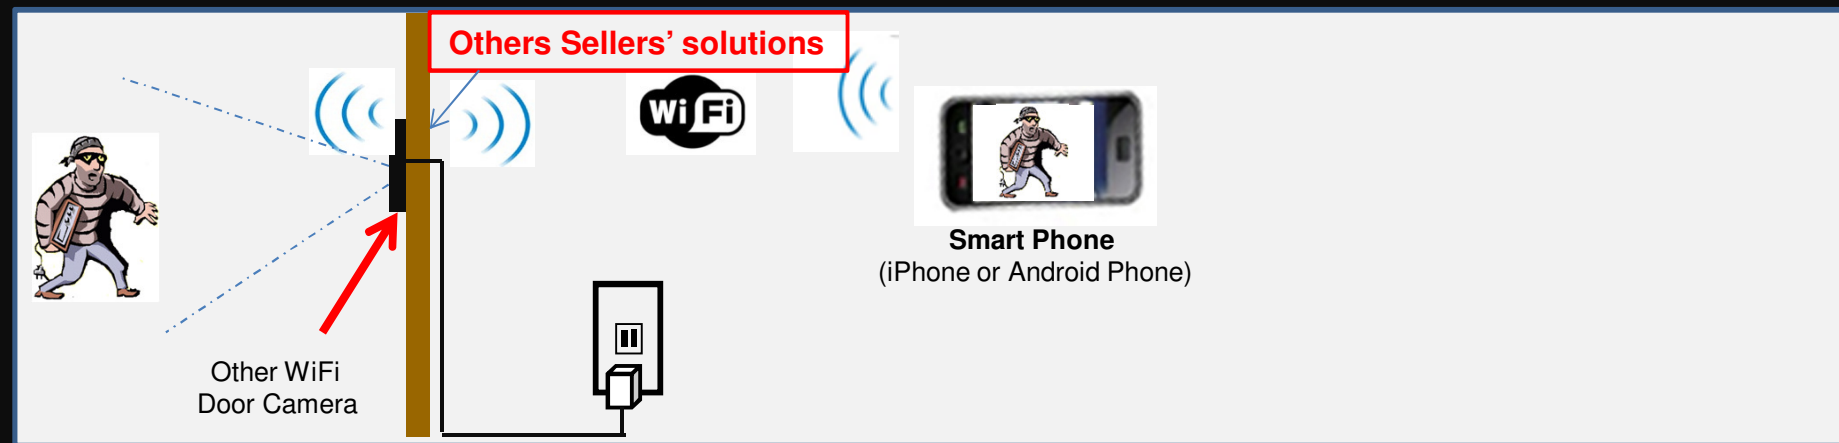

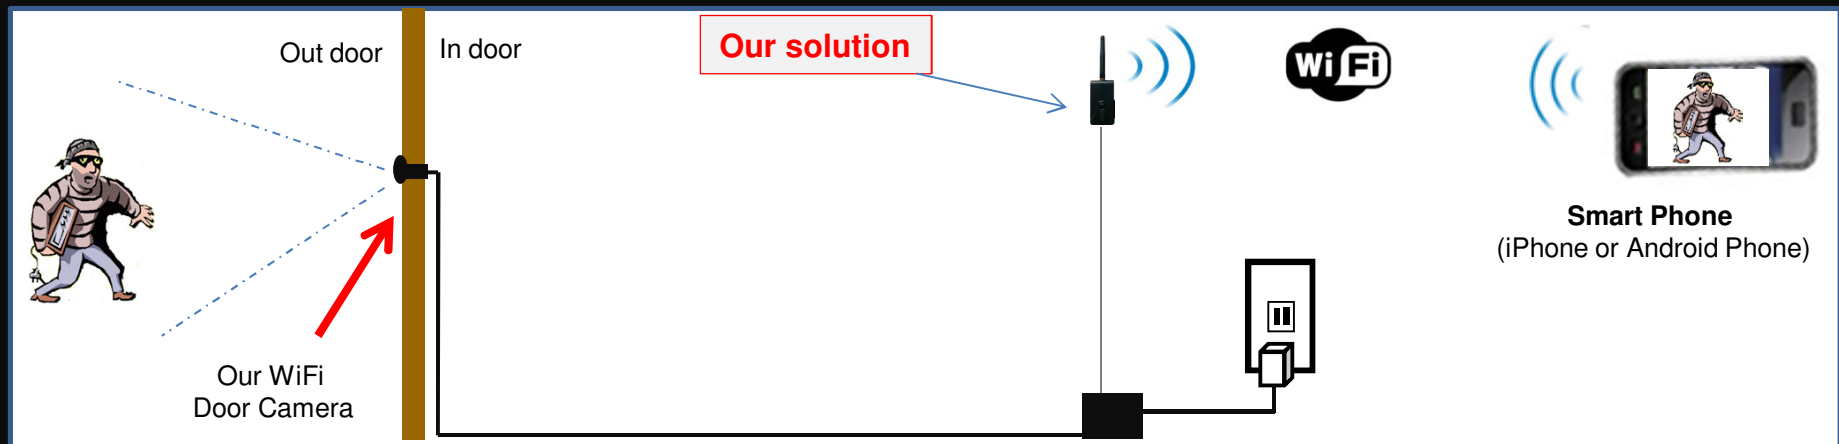

Why our WiFi door camera solution is better than other sellers' products?

1. FCC regulations rule the transmitting output power of all WiFi device, therefore all WiFi device has a fixed / limited signal transmitting distance.
2. Our WiFi Door camera design approach allowing you implement the WiFi transceiver in a location inside your house for getting the most effective video signal for viewing.
3. Other seller's products are having the WiFi transceiver built within the door camera and installed on door. Their designs are wasting WiFi output power. There are about half of WiFi signal leaked to outside of your door. and you may not be able to receiving good video signal if you have a large house, and even someone outside your house may using the leaked WiFi signal to spying your front door.
